

## SITE SURVEY REQUIREMENTS - WALL PANELLING

Please contact us if you are in doubt about the site survey. We have tried to answer the most common questions below:

- If available, please supply drawings including elevations.
- Please ensure walls have been prepared to a flat and smooth standard i.e., plastered and sealed or covered in PLY wherever our product will be fitted.
- Base and wall cabinets are installed and in final position.
- Light pelmets, cornices and under pelmet lights in place for site survey.
- Boxing for pipes etc fitted.
- Any fittings to go onto or into the glass must have been fitted in the final position and then removed with the hole positions clearly marked.
- Any electrical boxes are fitted in final position with face plates screwed on where possible (minimum 50mm from edge of the glass and 15mm between sockets)
- Please ensure the site is clear with good access for the site surveyor to access. Any breakable items are removed.
- The customer or an authorized representative should ideally be on site for directions on questions that arise from the survey. If a question cannot be answered due to absence there is a risk the survey will have to be rescheduled and may be at a cost to the customer.

**Please Note:** Once the site survey has been completed, it may not be possible to add or alter fixtures or fittings.

### Parking for Site Survey & Installation

- Please notify us of parking options.
- If free parking is not available, a charge may be liable from the customer.

Please confirm by email when you are ready.

Please note if the site survey is cancelled in less than 48 hours or the site isn't ready the customer maybe subject to a charge.
